(a) Change vs $\alpha = 0$, $B = 50$
test accuracy difference (pt)
identical runs for $\alpha \geq 0.2$
prior strength α
(b) Change vs $\alpha = 0$, $B = 100$
identical runs for $\alpha \geq 0.2$
circled: raw $p < 0.05$ (none after Holm)
prior strength α
(c) Pruning (A5), vs default 15%, $B = 100$
